Contents

Preface **iv**

Contents **viii**

1 Brownian Motion **1**
1.1 The Physical Approach to Brownian Motion* 2
1.2 Stochastic Processes 3
1.3 Definition and First Properties of Brownian Motion 5
1.4 Brownian Martingales 6
1.5 Brownian Motion as a Gaussian Process 8
1.6 Transformations of Brownian Motion 9
1.7 Sample Path Properties 10
1.8 Markov and Strong Markov Properties 15
1.9 Hitting Times and the Reflection Principle 17
1.10 The Running Maximum of Brownian Motion 17
1.11 Brownian Motion in Higher Dimensions 20
1.12 Solutions to the Exercises 29
1.13 Problems 31
1.14 Notes 32

2 Stochastic Integration **33**
2.1 Motivation 33
2.2 The Stochastic Integral 35
2.3 Itô and Stratonovich Integrals 46
2.4 Itô's Formula 48
2.5 Girsanov's Theorem 57
2.6 Martingale Representation 65
2.7 Solutions to the Exercises 69
2.8 Problems 73
2.9 Notes 75

3 Stochastic Differential Equations **76**
3.1 Existence and Uniqueness of Solutions 77
3.2 Linear SDEs 79
3.3 Examples 83
3.4 Integration Techniques 91
3.5 Markov and Strong Markov Properties of the Solutions 95
3.6 Diffusions 100

3.7 Kolmogorov's Equations and Feynman-Kac Formula 102
3.8 Solutions to the Exercises 107
3.9 Problems 114
3.10 Notes 115

4 Solutions to the Problems 117

A Measure Theory, Integration, and Functional Analysis 134
A.1 Measures 134
A.2 Integration 135
A.3 σ-Algebras and Generators 140
A.4 Product Measures 140
A.5 The Borel σ-algebra 141
A.6 The Lebesgue Measure 142
A.7 L^p Spaces 143
A.8 Hilbert Spaces 145
A.9 The Radon-Nikodym Theorem 151

B Probability Theory 152
B.1 Definitions and Preliminary Results 152
B.2 Independence 157
B.3 Moment Generating and Characteristic Functions 160
B.4 The Normal Distribution 161
B.5 Convergence 162
B.6 Conditional Expectations 164
B.7 Multidimensional Distributions 169
B.8 The Multivariate Normal Distribution 173

Bibliography 176
