

QuantPhi Series in Mathematical Finance

Alberto Bueno Guerrero

INTRODUCTION
TO
STOCHASTIC
CALCULUS

Contents

Preface	iv
Contents	viii
1 Brownian Motion	1
1.1 The Physical Approach to Brownian Motion*	2
1.2 Stochastic Processes	3
1.3 Definition and First Properties of Brownian Motion	5
1.4 Brownian Martingales	6
1.5 Brownian Motion as a Gaussian Process	8
1.6 Transformations of Brownian Motion	9
1.7 Sample Path Properties	10
1.8 Markov and Strong Markov Properties	15
1.9 Hitting Times and the Reflection Principle	17
1.10 The Running Maximum of Brownian Motion	17
1.11 Brownian Motion in Higher Dimensions	20
1.12 Solutions to the Exercises	29
1.13 Problems	31
1.14 Notes	32
2 Stochastic Integration	33
2.1 Motivation	33
2.2 The Stochastic Integral	35
2.3 Itô and Stratonovich Integrals	46
2.4 Itô's Formula	48
2.5 Girsanov's Theorem	57
2.6 Martingale Representation	65
2.7 Solutions to the Exercises	69
2.8 Problems	73
2.9 Notes	75
3 Stochastic Differential Equations	76
3.1 Existence and Uniqueness of Solutions	77
3.2 Linear SDEs	79
3.3 Examples	83
3.4 Integration Techniques	91
3.5 Markov and Strong Markov Properties of the Solutions	95
3.6 Diffusions	100

3.7	Kolmogorov's Equations and Feynman-Kac Formula	102
3.8	Solutions to the Exercises	107
3.9	Problems	114
3.10	Notes	115
4	Solutions to the Problems	117
A	Measure Theory, Integration, and Functional Analysis	134
A.1	Measures	134
A.2	Integration	135
A.3	σ -Algebras and Generators	140
A.4	Product Measures	140
A.5	The Borel σ -algebra	141
A.6	The Lebesgue Measure	142
A.7	L^p Spaces	143
A.8	Hilbert Spaces	145
A.9	The Radon-Nikodym Theorem	151
B	Probability Theory	152
B.1	Definitions and Preliminary Results	152
B.2	Independence	157
B.3	Moment Generating and Characteristic Functions	160
B.4	The Normal Distribution	161
B.5	Convergence	162
B.6	Conditional Expectations	164
B.7	Multidimensional Distributions	169
B.8	The Multivariate Normal Distribution	173
	Bibliography	176
	Index	179
